Cambria County Comprehensive Plan: Toward a Sustainable Future – 2030. It is understood that this name is not just a new “label” but an *approach* in terms of the state of art in present-day planning. Even with this forward-looking approach, the Plan Update should build on the wealth of information, findings and recommendations.

Attention will be given to the Comprehensive Planning elements required by the Municipal Planning Code (MPC) including the development of all plans and recommendations (i.e. land use, housing, transportation, natural/historic resources, water supply plan and community facilities/utilities), interrelationships among plan components, implementation strategies, contiguous municipality compatibility analysis/statement and special requirements for County Plans (i.e. mineral/natural resources, land uses of regional impact, agricultural preservation/compatibility and historic preservation).

The EADS Group is working with the staff of the Cambria County Planning Commission in the collection, analysis and interpretation of information at this phase of the planning process. Draft narratives and mapping will be provided on this web site throughout the planning process. Check back often for additional details
